Project Title	Funding	Institution
Pre-clinical evaluation of oxytocin for ASD treatment discovery	$244,898	University of California, Davis
Synaptic pathophysiology of 16p11.2 model mice	$0	Massachusetts Institute of Technology
Modeling The Serotonin Contribution to Autism Spectrum Disorders	$227,339	Vanderbilt University
Prefrontal function in the Shank3-deficient rat: A first rat model for ASD	$457,912	ICAHN SCHOOL OF MEDICINE AT MOUNT SINAI
Identifying therapeutic targets for autism using Shank3-deficient mice	$487,448	ICAHN SCHOOL OF MEDICINE AT MOUNT SINAI
Investigations of a Proposed Molecular Feedback Loop in Cortical Neurons in Psychiatric Pathogenesis	$25,000	University of California, San Francisco
Investigating Wnt signaling variants in mouse models of ASD	$0	University of California, San Francisco
Characterization of brain and behavior in 7q11.23 duplication syndrome-Project 1	$103,684	University of California, Davis
16p11.2 deletion mice: autism-relevant phenotypes and treatment discovery	$0	University of California, Davis
Preclinical Autism Consortium for Therapeutics (PACT)	$0	University of California, Davis
Rebuilding Inhibition in the Autistic Brain	$24,840	Brandeis University
Preclinical testing of novel oxytocin receptor activators in models of autism phenotypes	$0	University of North Carolina
Preclinical Autism Consortium for Therapeutics (PACT)- Boston Children's Hospital	$0	Boston Children's Hospital
Neuroligin function in the prefrontal cortex and autism pathogenesis	$250,000	Stanford University
The tissue-specific transcriptome anatomy of 16p11.2 microdeletion syndrome	$0	Massachusetts General Hospital
Neurobiological Signatures of Social Dysfunction and Repetitive Behavior	$400,710	NEW YORK STATE PSYCHIATRIC INSTITUTE
Characterization of the Schizophrenia-associated 3q29 Deletion in Mouse	$417,252	Emory University
Formation and Function of Circuitry for Vocal Learning	$361,456	University of California, Los Angeles
Testing brain overgrowth and synaptic models of autism using NPCs and neurons from patient-derived iPS cells	$0	University of California, San Francisco
Oxytocin Receptors and Social Behavior	$440,363	Emory University
Novel approaches to enhance social cognition by stimulating central oxytocin release	$0	Emory University
Roles of Oxytocin and Vasopressin in Brain	$1,866,157	National Institutes of Health
Comparison of cortical circuit dysfunction in ASD model mice	$62,500	The Regents of the University of California, Berkeley
Microcircuit endophenotypes for autism	$62,500	University of California, San Francisco
Understanding brain disorders related to the 15q11.2 chromosomal region	$250,000	Johns Hopkins University
Effects of Chronic Intranasal Oxytocin	$1,105,938	University of California, Davis
Testing brain overgrowth and synaptic models of autism using NPCs and neurons from patient-derived iPS cells	$0	Salk Institute for Biological Studies
High-throughput drug discovery in zebrafish models of ASD risk genes	$62,500	Yale University
Functional Analysis of Rare Variants in Genes Associated with Autism	$147,905	Yale University
Understanding copy number variants associated with autism	$125,000	Duke University
The role of PTCHD1 in thalamic reticular nucleus function and ASD	$250,000	Massachusetts Institute of Technology

Project Title	Funding	Institution
Characterization of synaptic and neural circuitry dysfunction underlying ASD-like behaviors using a novel genetic mouse model	$0	Duke University
Role of Caspr2 (CNTNAP2) in brain circuits - Project 2	$0	University of California, Los Angeles
Molecular consequences of strong effect ASD mutations including 16p11.2	$250,000	Massachusetts General Hospital
A novel window into ASD through genetic targeting of striosomes - Project 1	$77,447	Cold Spring Harbor Laboratory
Preclinical testing of novel oxytocin receptor activators in models of autism phenotypes	$0	University of North Carolina
A novel neural circuit analysis paradigm to model autism in mice	$238,500	Duke University
Disruption of Cortical Projection Neurons, Circuits, and Cognition in ASD	$244,881	GEORGE WASHINGTON UNIVERSITY
16p11.2: Defining the gene(s) responsible (grant 1)	$212,100	Cold Spring Harbor Laboratory
Mechanisms of circuit failure and treatments in patient-derived neurons in autism	$406,250	BROWN UNIVERSITY
Preclinical testing of novel oxytocin receptor activators in models of autism phenotypes	$0	University of North Carolina
Biomarker discovery for low sociability: A monkey model	$62,500	Stanford University
Detecting and Treating Social Impairments in a Monkey Model	$146,468	Stanford University
Safety, Efficacy and Basis of Oxytocin and Brain Stimulation Therapy in ASD	$114,583	University of Pennsylvania
Novel Genetic Models of Autism	$329,427	UT SOUTHWESTERN MEDICAL CENTER
Striatal synaptic Abnormalities in Models of Autism	$397,500	UT SOUTHWESTERN MEDICAL CENTER
Role of Caspr2 (CNTNAP2) in brain circuits - Project 1	$0	King's College London
Role of Caspr2 (CNTNAP2) in brain circuits- Core	$0	Weizmann Institute of Science
In vivo approach to screen ASD allele functions in cortical interneurons	$125,000	University of California, San Francisco
Analysis of oxytocin function in brain circuits processing social cues	$125,000	Harvard University
Novel therapeutic targets to treat social behavior deficits in autism and related disorders	$0	University of Texas San Antonio
Examination of the mGluR-mTOR pathway for the identification of potential therapeutic targets to treat fragile X	$0	University of Pennsylvania
Preclinical evaluation of NMDA receptor antagonists for treating Rett Syndrome	$396,250	CASE WESTERN RESERVE UNIVERSITY
Neural mechanisms of social reward in mouse models of autism	$249,994	Stanford University
Characterization of brain and behavior in 7q11.23 duplication syndrome-Core	$138,402	University of Toronto
Mechanisms of stress-enhanced aversive conditioning	$381,250	Northwestern University
Studies of genetic and metabolic disorders, autism and premature aging	$34,275	National Institutes of Health
THE GENETIC AND NEUROANATOMICAL ORIGIN OF SOCIAL BEHAVIOR	$391,250	Baylor College of Medicine

Project Title	Funding	Institution
Exploring VIPR2 microduplication linkages to autism in a mouse model	$42,000	University of California, Los Angeles
Cellular models for autism de novo mutations using human stem cells	$125,000	Broad Institute, Inc.
Behavioral evaluation of a novel autism mouse model	$0	Shriners Hospitals for Children - Northern California
Endocannabanoid Enhancement of Sociability in Autism-related Mouse Models	$0	University of California, Irvine
In Vivo Functional Analysis of Autism Candidate Genes	$123,750	Baylor College of Medicine
A new non-human primate model for studying communicative behaviors	$62,500	Johns Hopkins University
Analysis of autism-associated alleles in C. elegans	$108,061	California Institute of Technology
Role of the hippocampal CA2 region in autism	$62,500	Columbia University
Deep Brain Stimulation for Autistic Self-Injurious Behavior	$0	Johns Hopkins University
SCN2A mouse	$60,000	Duke University
Comprehensive Phenotyping of Autism Mouse Models	$0	University of Pennsylvania
Uncovering the impact of 16p11.2del on neurons mediating motivated behavior	$124,957	The Trustees of the University of Pennsylvania
CHD8 and beta-catenin signaling in autism	$125,000	University of Chicago
Top-down dynamics in autism	$105,000	ROCKEFELLER UNIVERSITY
A mouse model of top-down interactions	$0	ROCKEFELLER UNIVERSITY
Optical imaging of circuit dynamics in autism models in virtual reality	$165,691	Harvard University
PsychoGenics Inc.	$98,114	PsychoGenics Inc.
Brain imaging of treatment response	$62,167	The Hospital for Sick Children
A Unified Molecular Mechanism Explaining Social Behavior and Oxytocin levels in ASD	$25,000	Washington University in St. Louis
A novel window into ASD through genetic targeting of striosomes - Core	$170,040	Massachusetts Institute of Technology
Scalable technologies for genome engineering in hIPSCs	$341,000	University of California, San Diego
The Role of Cation/Proton Exchanger NHE9 in Autism	$125,000	University of California, San Francisco
Dissecting striatal circuit dynamics during repetitive behaviors in autism	$107,254	FundaÁ„o D. Anna de Sommer Champalimaud e Dr. Carlos Montez Champalimaud
Human Gene Editing and In Situ Sequencing of Neuronal Microcircuit Arrays	$125,000	Harvard University
Targeting System Xc- for the treatment of the Autism Spectrum Disorder subpopulations, Fragile X syndrome and Phelan-McDermid syndrome	$151,366	PROMENTIS PHARMACEUTICALS, INC.
Electrophysiological consequences of SCN2A mutations found in ASD	$60,000	The Regents of the University of California, San Francisco (Contracts & Grants)
Identifying autism-associated signaling pathways regulated by CHD8 in vivo	$62,500	King's College London
Role of the CUL3-mediated ubiquitination pathway in autism	$0	Portland State University

Project Title	Funding	Institution
Circuit-level developmental and functional dynamics in an ASD genetic model	$0	Univeristy of Queensland
Linking cortical circuit dysfunction and abnormal behavior in genetic mouse models of autism	$268,210	University of California, Los Angeles
Rapid drug discovery in genetic models of autism	$0	Research Center of Centre hospitalier de l'UniversitÈ de MontrÈal
Functional analysis of the Schizophrenia and Autism Spectrum Disorder gene TCF4 i	$457,500	LIEBER INSTITUTE, INC.
Pinpointing Genes Underlying Autism in Chromosomal Region 16p11.2	$1,250	Cold Spring Harbor Laboratory
Functional connectivity in monogenic mouse models of autism	$0	Fondazione Istituto Italiano di Tecnologia
Stable Zebrafish Models of Autism Spectrum Disorder	$75,250	University of Miami
Chromatin remodeling in autism	$250,000	Stanford University
How do autism-related mutations affect basal ganglia function?	$125,000	University of California, Berkeley
A zebrafish model to identify epigenetic mechanisms relevant to autism	$0	King's College London
